

Maestro Web

Solution for company-wide PC's system recovery management

Most companies and organizations are processing jobs through WAN nowadays, eliminating restriction of time and location.

If PC system goes down at a remote location from the system support part, the recovery will be delayed with various reasons. Then there should be a possibility that an enormous cost incurs in the case of outsourcing the recovery job along with the possibility of leakage of your valuable corporate information.

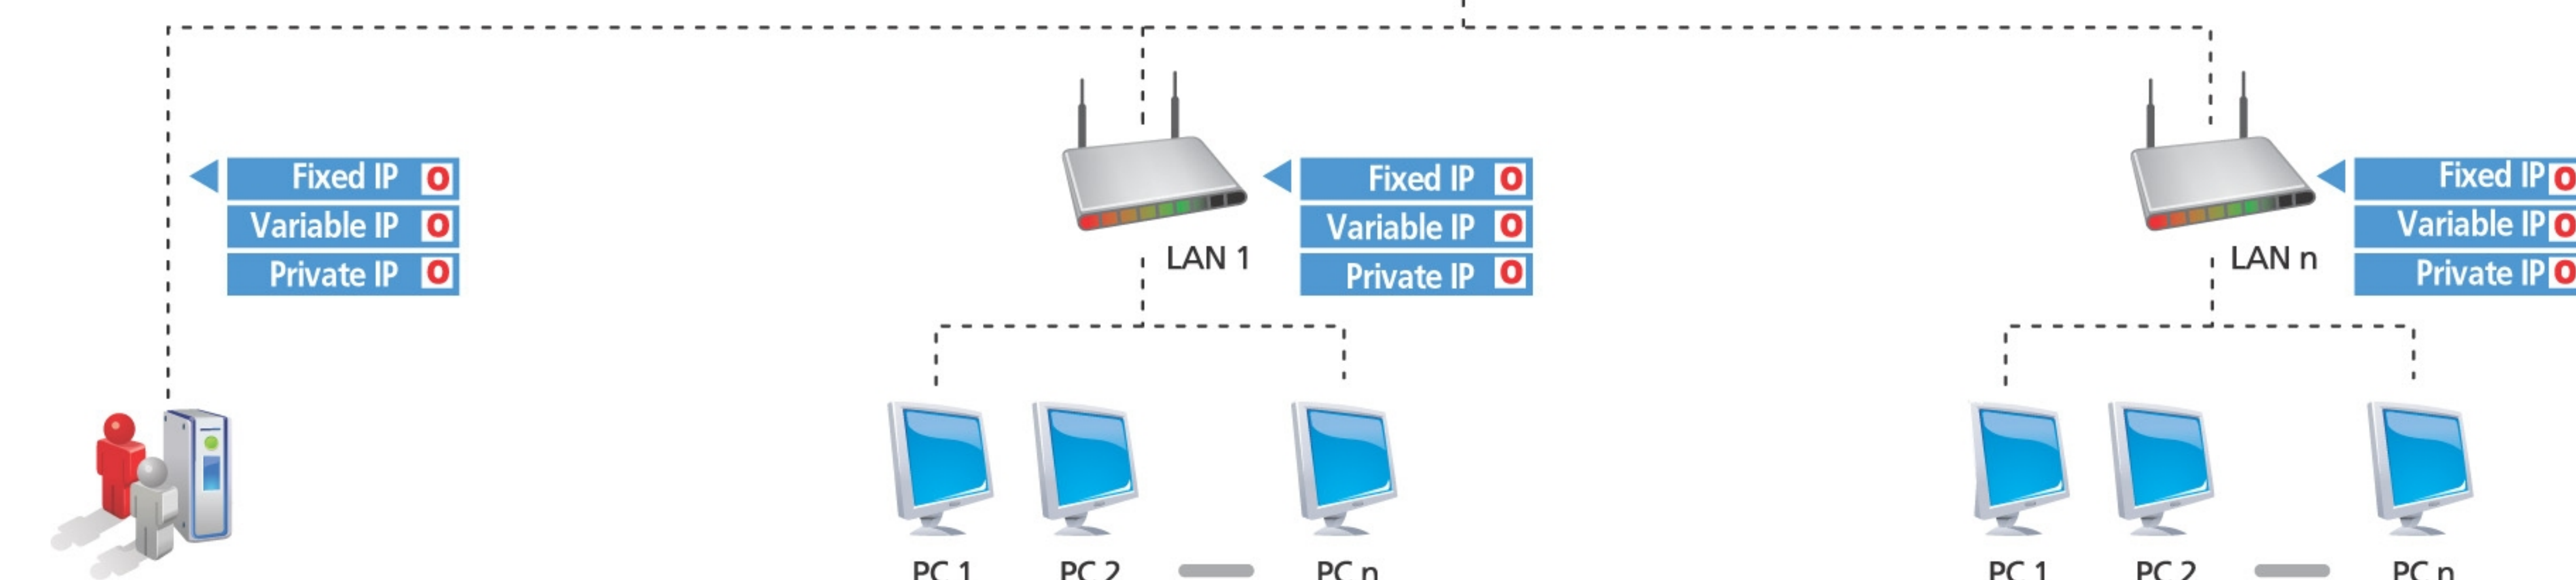

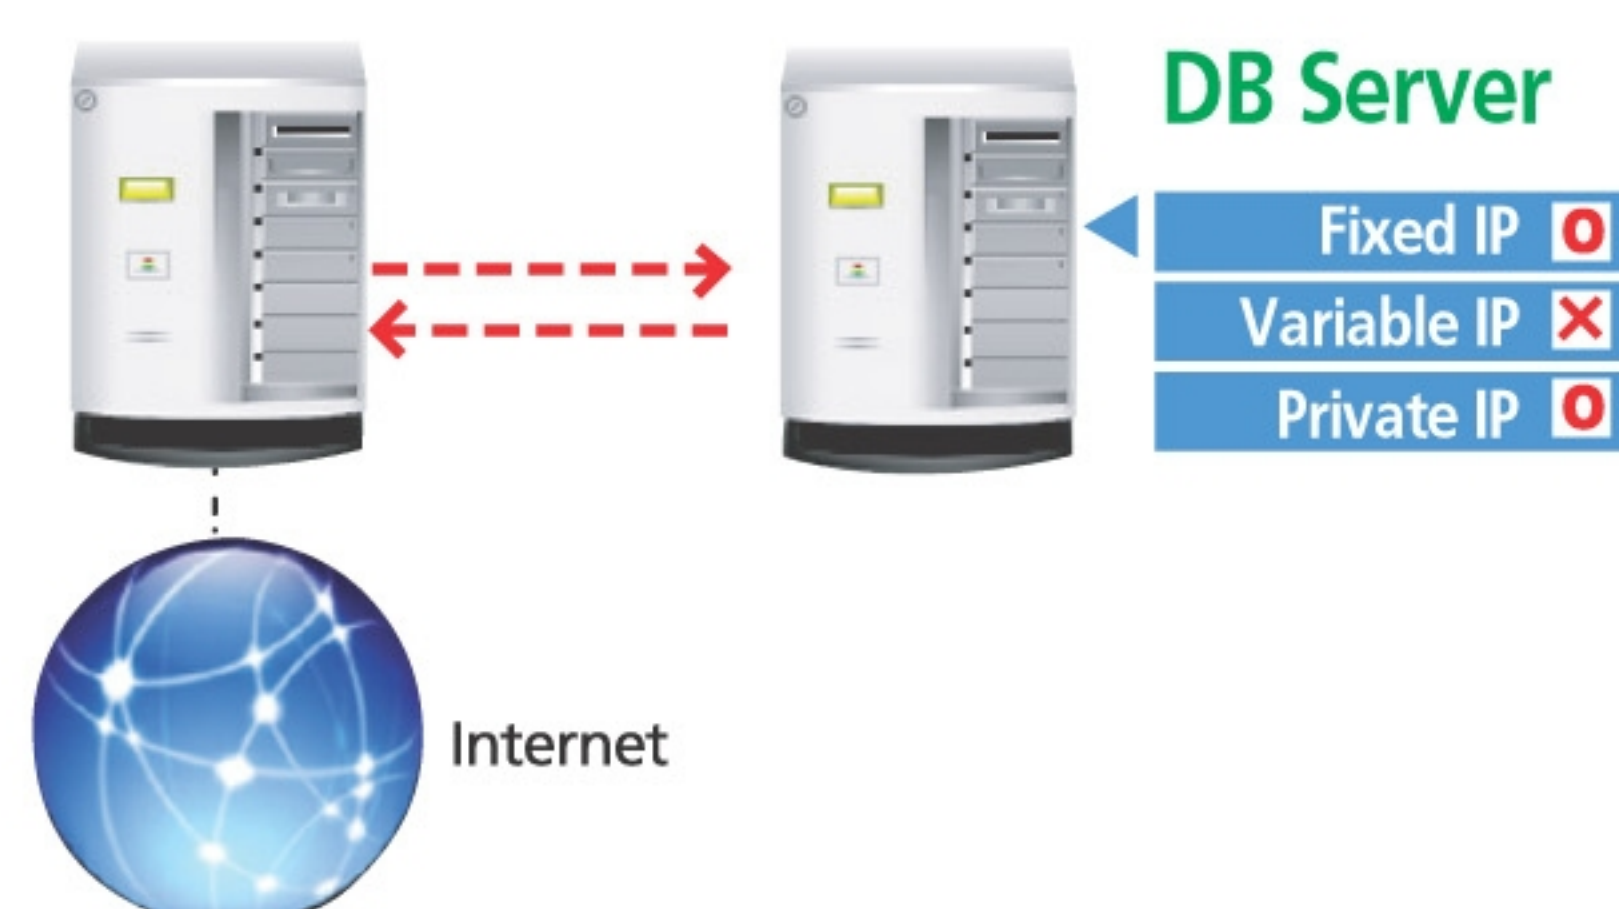

The collective management for PC system by central IT center will guarantee the systematic BCP(business process contingency).

Maestro Web is the optimal WAN-support system management solution that guarantees the systematic BCP by supporting users at control It Center to manage the entire organization-wide PC systems on a real time basis and to recover any critical system outages.
